## Re:mote Geotechnical Monitoring System

**In addition to vibration monitoring, we can also help you with other monitoring needs—such as tilt, crack, water level and slope stability.**

GeoSonics/Vibra-Tech has Re:mote Geotechnical Monitoring Technology that uses the

highest quality sensors available to match resolution and precision required for each project. All data is continuously collected from our monitoring system and posted to a customized client website with an alarm notification system to help reduce your operational liability.

Let us show you how the GeoSonics/Vibra-Tech Re:mote Geotechnical Monitoring System allows you to get data to project personnel without requiring them to spend hours in the field, saving you operational time and resources.
